✉ amrita0205kadam@gmail.com — ☎ +91-8904220942 — [LinkedIn](#) — [GitHub](#) — 📁 [Portfolio](#)

Education

Indian Institute of Information Technology, Raichur

Expected Aug 2027

B.Tech in Computer Science and Engineering

CGPA: 8.51

– Relevant Courses: Deep Learning, Generative AI, Agentic AI, Foundations of Machine Learning, Data Structures and Algorithms.

Technical Skills

Languages: Python, SQL

AI/ML & Deep Learning: Deep Learning Foundations, LangChain, LangGraph, CrewAI, RAG Pipelines, ChromaDB, Vector Search, Groq LLMs, PyTorch, TensorFlow (Generative AI coursework).

Backend & Infra: FastAPI, REST APIs, PostgreSQL, Git, Ubuntu(WsL2)

Projects

Agentic AI Career Advisor — [GitHub](#) — [Demo](#)

Oct – Nov 2025

- Engineered a **multi-agent AI system** using **LangGraph** and **Groq LLMs** with autonomous agents for job-market analysis, resume optimization, skill-gap detection, and mock interview coaching — orchestrated via a supervised workflow graph designed for reliability and extensibility, not one-off prompting.
- Implemented a **RAG pipeline** with **ChromaDB** and Gemma 300M embeddings for semantically accurate, role-specific career suggestions with reduced hallucination.
- Selected by **IIIT Dharwad faculty** for collaboration; recognized for demonstrating all core Agentic AI capabilities: Autonomy, Planning, Reasoning, Adaptability, and Content Awareness.
- **Tech:** LangChain, LangGraph, Multi-Agent Systems, Groq LLMs, ChromaDB, RAG, Python, PostgreSQL

MLOps Prediction API — End-to-End ML Pipeline — [GitHub](#)

2026

- Built a **production-grade ML pipeline** featuring **MLflow** experiment tracking (multi-solver comparison: lbfgs, saga, newton-cg), versioned model registry, and a **FastAPI** REST endpoint — mirroring real-world MLOps infrastructure at scale; achieved **97.5% test accuracy**.
- I was just curious as to how exactly do people deploy any Model and check to monitor it continuously if I were to work in production which I was inspired from my past internship where I was chosen to do the backend metrics (**system health, API health and calls**) monitoring.
- **Tech:** MLflow, FastAPI, scikit-learn, Python, REST APIs, Model Registry, Unicorn

Blog Writing AI Agent — Multi-Agent Content Pipeline — [GitHub](#)

2026

- Built a **multi-agent CrewAI pipeline** with four specialized agents — Researcher, Writer, Editor, and Social Media Manager — that autonomously researches a topic and produces a publication-ready blog post alongside Twitter/X and LinkedIn content.
- Powered by **Groq (llama-3.3-70b-versatile)** for fast inference; resolved a known `litellm/openai` dependency conflict in CrewAI to enable stable local execution without reinstallation overhead.
- **Tech:** CrewAI, Groq LLMs, Python, Multi-Agent Systems, LLM Orchestration

Experience

TerraBiz

Feb 2025 – Aug 2025

Back End Developer Intern

Remote

- Architected and deployed **scalable, production-grade RESTful APIs** with Node.js and Express.js, handling high-throughput traffic across multiple live services — hands-on experience shipping infrastructure that has to hold up in production, not just in a notebook.
- Designed and optimized **MongoDB database schemas** for performance, data integrity, and security; reduced query latency through indexing and schema restructuring.
- **Tech:** JavaScript, Node.js, Express.js, MongoDB, REST APIs, Git, Postman, Vercel, Render

Extracurricular

Summer of Bitcoin

2026

Bootcamp Participant

Remote

- Selected for a competitive global program on Bitcoin protocol and open-source engineering; shipped a working tool every week under a hard deadline.
- Built **Bit Lens**: dual-mode Bitcoin transaction analyzer (CLI + web) covering SegWit, script parsing, and RBF. [GitHub](#) — [Demo](#)
- Built **Coin Smith**: BIP-174 PSBT builder with greedy coin selection and dust-safe change logic. [GitHub](#) — [Demo](#)

CodeSoc — Tech Coordinator, IIIT Raichur

2023 – 2025

- Mentored **150+** students in DSA and Competitive Programming; organized [Code Conflux Hackathon](#) and conducted InterIIIT hackathon round-1 **UDBHAV**.
